

Ing. Karel Zíbar

Web Developer with over 12 years of experience, primarily focused on frontend development. Currently expanding my backend knowledge to grow into a full-stack developer role. I actively leverage AI tools to enhance productivity and streamline development workflows. Comfortable working in remote, English-speaking environments and collaborating across distributed teams. Experienced in both startup and enterprise settings, with a track record of contributing to the growth of two companies that achieved Unicorn status

Skill Highlights

- TypeScript
- React.JS
- Tanstack stack
- Next.Js
- Node.js
- Unit / E2E testing
- Automations
- CI/CD pipelines
- Java/Spring
- AI Agents usage

Languages

Czech – Native speaker

English – Professional working proficiency

Education

2011 - 2017

University of West Bohemia in Pilsen

Faculty of Applied Sciences - **Software Engineering**

Experience

05/2023 - 04/2026

Mews — Senior Front-end Developer

- Worked on a large-scale property management system used by enterprise hotels and hotel chains
- Built and maintained complex, high-traffic UI used daily to manage large volumes of bookings
- Except others I led refactoring of a critical real-time reservations timeline with focus on performance (virtualization, lazy loading, architectural improvements)
- Supported other teams as a front-end specialist, accelerating feature delivery through automation and architectural changes
- Mentored junior developers, shared front-end best practices across teams, and participated in technical interviews
- Integration of AI into the developer's workflow

05/2018 - 05/2023

Rohlik.cz — Senior Front-end Developer

- Worked on the customer-facing e-commerce platform
- Developed and maintained key parts of the storefront, including checkout and payment gateway integrations
- Worked within a multi-tenant architecture supporting multiple markets and deployments
- Contributed to large-scale refactoring, performance optimizations, and modernization of the front-end stack
- Implemented automation improvements in the delivery workflow
- Maintained strong test coverage through unit and end-to-end testing
- Delivered technical training sessions and shared front-end best practices across teams

S9Y — Web and App Developer

- Worked as a Front-End / Full-Stack Developer within S9Y, contributing to multiple projects across different client companies
- Used different tech stacks depending of the project from React, React Native, GraphQL but also Node.js or PHP with Nette
- Delivered front-end and full-stack solutions in both startup and enterprise environments, adapting quickly to different domains and tech stacks
- **Trivi s.r.o.:** Developed a modern accounting system
- **Covergo:** Built web and mobile applications for insurance management
- **Workpress Aviation:** Contributed to a production system for commission, cash-flow, and production-flow management

07/2014 - 06/2016

Socialbakers — Fullstack Javascript Developer

- Developed front-end and back-end for several internal applications
- Worked one of the main applications for analyzing social media data
- Worked with React, Redux, and Node.js, primarily using CoffeeScript
- Built and maintained data-driven features for processing and visualizing social network data
